VPondz

VZ Environmental introduced **VPondz™** to address our customer's needs for spill containment. To provide reliable containment and quality assurance, VZ Environmental uses hard plastic walls with a durable, reinforced liner. This liner is chosen also for its non-skid texture adding extra protection against slips, trips, and falls. 2' tall **VPondz™** are typically used for spill containment and 4' tall **VPondz™** are commonly used as temporary above ground frac ponds.
